

Bringing the Stars to You!

Peoria Riverfront Museum Telescope Program

An astronomy expert will give your group a tour of the current night sky using our 8-inch reflecting telescope. We will show your group the Moon (if visible), current planets, and deep-sky objects (galaxies, star clusters, and nebulae) with the telescope. Using a green laser, we will also point out constellations in the real sky, and share a star story or two!

Program is subject to weather conditions. Payment is due upon arrival.

Cost: \$150 per hour of programming + standard IRS mileage rate for driving.

Scheduling: Contact Renae Kerrigan at 309-863-3030 or

rkerrigan@peoriariverfrontmuseum.org

Some of the beautiful objects you might be able to see:

Andromeda Galaxy

Saturn

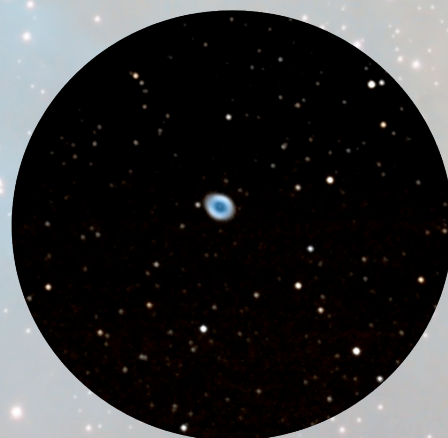

Jupiter & 4 Moons

Orion Nebula

Globular Cluster

Ring Nebula
